Summary of Services

With our client running a 24/7 shipping operation to 123 countries and also undergoing a corporate merger, we were faced with a limited window of opportunity to accomplish the relocation of 120 employees and associated technology.

Provided project management and technical expertise to perform the employee movement of **120 complex systems**. Also provided assistance in relocation of server room.

Project Management Services: Performed analysis of relocation environment and determined cable mapping of each individual workstation was a requirement due to system complexities. Developed detailed labeling plan for systems to maintain multiple monitor configuration.

Technical Services: Using diagrams and **mapping to protect system integrity**, our technicians managed the successful relocation of these user stations with precision.

Environment

(120) Total Systems
2-4 Monitor Configuration
Ticket Printers
